

Reduce Or Eliminate Pain And Restore Your Quality Of Life

SPINAL CORD STIMULATION

Spinal Cord Stimulation Is Proven To **Reduce Or Eliminate** The Need For Medications

Spinal cord stimulation (SCS) is an **innovative technology** that can be an effective way to **decrease the severity of chronic pain** to a more manageable level.

85 to 90 percent of those who have undergone treatment report a **50 to 70 percent reduction** in overall pain.

Does Medication No Longer Help Your Patients?

Treatment Options Are Available For:

Chronic Pain

Diabetic Neuropathy

Previous Back Surgery

Back & Sciatic Pain

Complex Regional Pain Syndrome

Other Diagnoses

COMMONWEALTH SPINE

&

PAIN SPECIALISTS

VIRGINIA'S PROVEN INTERVENTIONAL PAIN EXPERTS

Step 1 In Office Trial

No Surgery Required!

A temporary stimulator is implanted to determine if the therapy provides satisfactory pain relief. The temporary stimulator generates mild electrical pulses that will be programmed to replace your areas of intense pain with the more pleasant feeling.

Step 2 Outpatient Procedure

If your trial is successful, a simple outpatient procedure is performed to implant the SCS system.

The SCS system uses a magnetic remote control that allows you to turn the electrical current on and off, or adjust the intensity, which rapidly responds to changes in the location or severity of your pain. Since the system is portable, SCS makes it possible to resume many normal daily life activities at home and at work and allows you to continue most of your regular recreational activities.

*Our **board-certified pain specialists** can determine if this is an option for you and help stop pain from interfering with your life.*
